

WELL INTERVENTION CANTILEVER

OVERVIEW

By introducing a Cantilever to the Lift-Boat, the traditional tower-rig-up becomes non-existent, and the well operation can be up-and-running within an hour. Exit the location is equally smooth, simply disconnect from the well and skid the complete rig-up back on the boat.

The Cantilever also allows for simultaneous operations to be run. Both Coiled Tubing and WireLine can be skidded independently and rigged up working on neighbouring wells.
